The future of urban mobility is connected, autonomous, electric, and wireless. And Qualcomm Technologies, Inc. (QTI) is one of the companies leading the charge — figuratively. Qualcomm™ Halo® (<https://www.qualcomm.com/products/halo>), our wireless electric vehicle charging (WEVC) technology, is a simple and efficient way to charge electric vehicles (EV), helping drive a cleaner and smarter future for urban mobility.

Imagine a future where you're in your EV on a highway and able to pick up charge while driving. Now imagine a slow-moving taxi queue of EVs being able to pick up charge even in traffic. These scenarios are all possible with Qualcomm Halo dynamic electric vehicle charging (DEVIC). Based on [our WEVC technology \(https://www.qualcomm.com/products/halo\)](https://www.qualcomm.com/products/halo), which allows cars to charge while parked, DEVIC — charging while driving — has been tested and proven.
